The **Evolution** range provides a truly versatile drinks vending solution for all environments where a high quality beverage needs to be served quickly and efficiently. The machines offer a full range of instant, freshbrew and bean to cup drinks as well as an extensive selection of still and carbonated cold drinks.

With its large ingredient and cup capacity, dynamic looks and user friendly interface the Evolution has been developed to provide delicious, thirst quenching drinks around the clock.

Evolution machines are now even more environmentally friendly! A new **power save** mode saves energy whilst keeping the machine “vend ready”. A bean to cup Evolution in power save mode now uses 33.6% less energy than when in idle mode while the Instant model uses 28.6% less energy.

So, select your favourite from the menu, push the button, and enjoy the experience!

Enjoy a delicious freshly brewed tea or coffee beverage!

The single freshbrew Evolution incorporates a paper brewer producing high quality freshbrew drinks from either pre-ground coffee or leaf tea.

The double freshbrew model features a compact, paperless double brewer capable of delivering both freshbrew tea and coffee selections through the same unit. The drinks are produced in separate brew chambers ensuring that there is no cross contamination between vends.

Choice of Selection Method

The Evolution offers a choice of two selection methods, the build-a-drink keypad (left) and a traditional numeric keypad (below), to suit any environment.

The build-a-drink keypad has user friendly backlit buttons making it easy to use. The build-a-drink approach is intuitive with the selections and pricing clearly displayed.

An enlarged LCD display provides clear and concise information.
